Ex no: 1 To demonstrate basic email operations such as creating and sending new email, replying to a received email, forwarding a message and sorting or searching emails in the inbox.

AIM:

To demonstrate basic email operations such as creating and sending new email, replying to a received email, forwarding a message and sorting or searching emails in the inbox.

ALGORITHM

Step 1: Start.

Step 2: Open a web browser and navigate to the preferred email service provider.

Step 3: Create a new email account by providing the required details, completing the verification process, and successfully registering the account.

Step 4: Log in to the email account using valid credentials.

Step 5: Compose and send an email by entering the recipient's email address, subject, message, attaching files (if required), and clicking **Send**.

Step 6: Reply to a received email by opening the email, selecting **Reply**, entering the response, and clicking **Send**.

Step 7: Forward an email by opening the email, selecting **Forward**, entering the recipient's email address, adding additional information if necessary, and clicking **Send**.

Step 8: Sort the emails in the Inbox by selecting the appropriate sorting option (such as Date, Sender, Subject, or Size) and applying the selected criteria.

Step 9: Log out of the email account.

Step 10: Stop the process.
